Most people don't know that speed detection technology has moved on in leaps and bounds over the past 25 years to where it is today. Laser is the new kid on the block and it is a powerful tool for law enforcement. Laser guns right out of "Star Wars" are now being used by Police the world over to enforce the speed limits.

A laser speed gun measures the round-trip time for light to reach a car and reflect back. Light from a laser speed gun moves a lot faster than sound -- about 984,000,000 feet per second (300,000,000 meters). A laser speed gun shoots a very short burst of infrared laser light and then waits for it to reflect off the vehicle. The gun counts the number of nanoseconds it takes for the round trip, and by dividing by 2 it can calculate the distance to the car.

The M27 & M47 come with a more powerful platform based on a new central CPU that controls user settings, software updates, synchronization of all transponders and communication.

Improved detection and jamming function (hardware & Software)

PC software updateable (via USB port on the CPU module)

The BLINDER Update Software also allows the user to change system settings like upstart behaviours, jamming period and more.

Free software downloads from BLINDER web site (Including e-mail upgrade notification service)

Multi-function System (user can easily select modes: parking sensor or garage door opener/jamming mode by a new 3-position switch)

M27 and M47 BLINDER XTREME

Special Features

High Power
Infrared Emitters

Super Sensitive
Detector Diodes
